

Transboundary cooperation in adaptation

Sonja Koeppel
UNECE Water Convention

Why basin-wide cooperation in adaptation?

- Prevent negative impacts of unilateral adaptation measures in riparian countries, thereby preventing potential conflict
 - Enable more effective and efficient adaptation through:
 - Wider knowledge base
 - Larger planning space: take measures in the basin where they have optimum effect
 - Possibility to share costs and benefits
- Transboundary/ basin-wide cooperation reduces uncertainty and costs!

The Water Convention: a living instrument

Objective: to protect and ensure the quantity, quality and sustainable use of transboundary water resources by facilitating cooperation

The Convention is based on three main pillars:

- Principle of prevention
- Principle of reasonable and equitable utilization
- Principle of cooperation
- Sustainability of resources is the overarching objective

Support to transboundary water cooperation thanks to:

A sound
legal
framework

An active
institutional
framework

Activities and
projects on the
ground

Climate change activities under the Water Convention

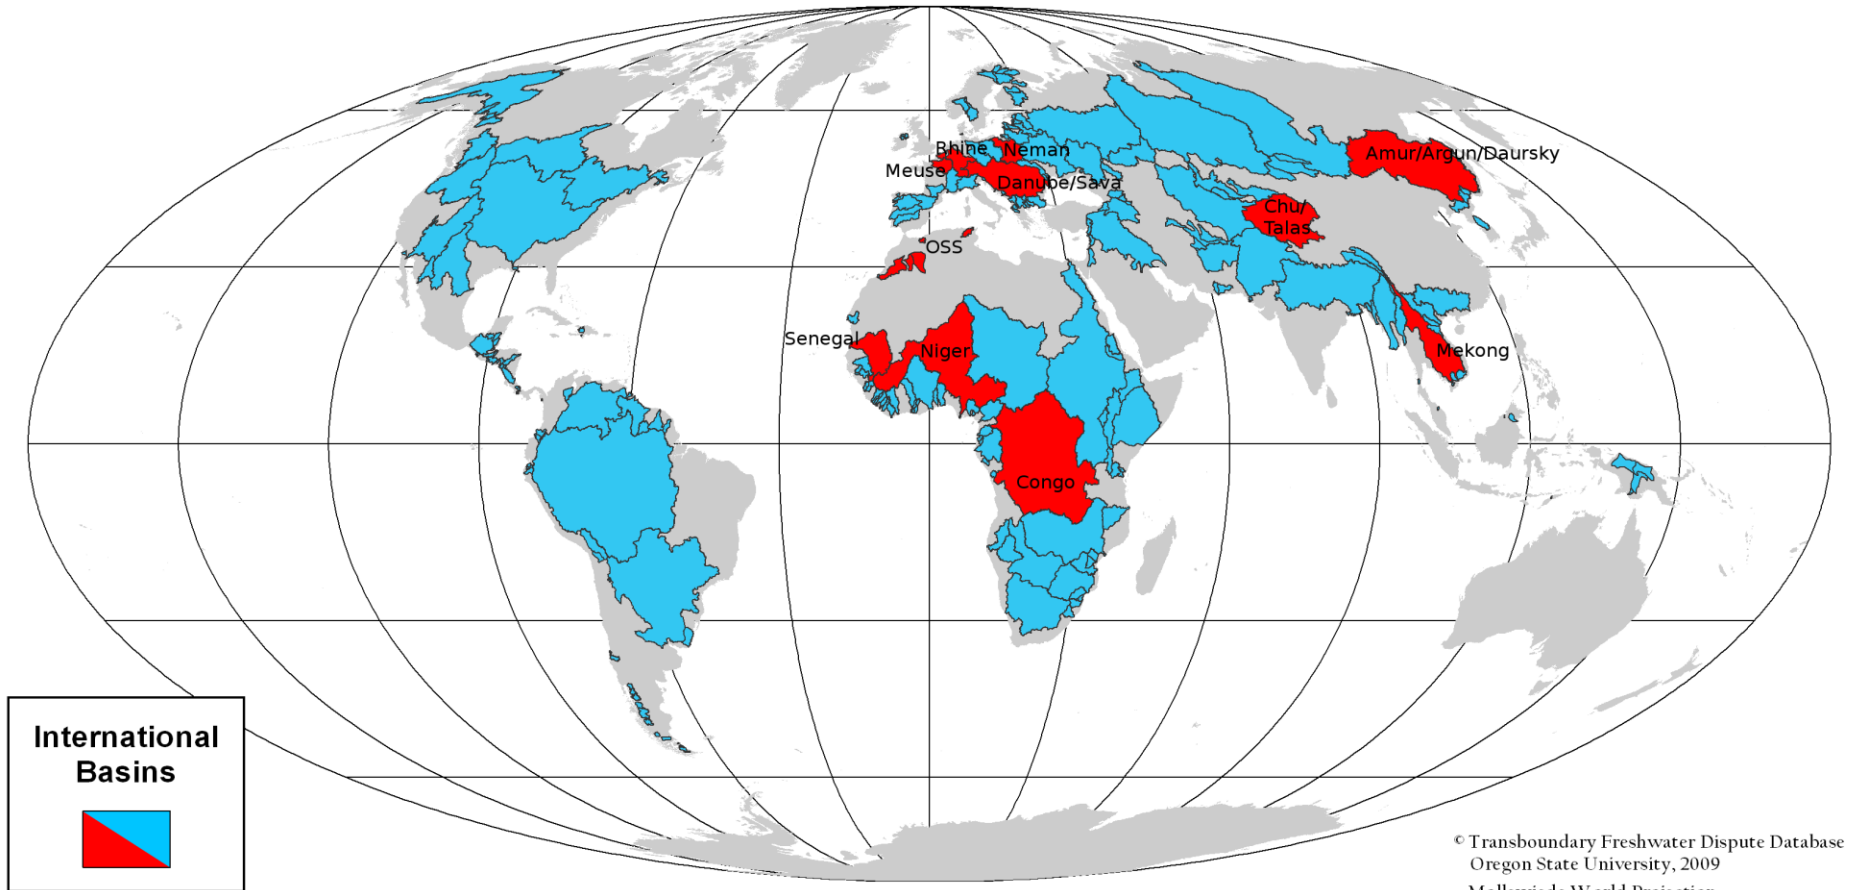

- Provisions of the Water Convention can help countries and basins adapt to climate change
- Guidance on Water and Adaptation to Climate Change adopted in 2009
- Programme of pilot projects on climate change adaptation in transboundary basins (Chu Talas, Neman, Dniester, Sava rivers)
- (Global) Platform for exchanging experience on this: regular workshops
- Global network of 14 basins working on climate change
- Collection of good practices and lessons learned published in 2015
- Policy work in global processes, such as UNFCCC COPs, ISDR

Basins in the global network of basins

Working on climate change

Examples of transboundary adaptation strategies

Transboundary adaptation strategies developed for:

- Neman (2015)
- Dniester (2015)
- Rhine (2014)
- Danube (2012): now revision of strategy
- Nile climate change strategy (2013)
- Lake Victoria Basin
- Climate investment plans for Niger basin and lake Chad
- Mekong
-

Training on how to prepare bankable project proposals for financing climate change adaptation in transboundary basins (Dakar, 21-23 June 2017)

- Strong interest from the countries; attended by 30 trainees from African basins and Dniester, Neman and Chu Talas
- Jointly organized with World Bank, European Investment Bank, African Development Bank and INBO
- Hosted by OMVS (Senegal basin development organization)
- Outputs: overview paper prepared and will be published- available at: <http://www.unece.org/index.php?id=45666#/>
- Future workshop planned for 2019 for Eastern Europe, Caucasus and Central Asia

Good practice examples

- Niger basin developed a transboundary climate investment plan
- Nile basin developed a basin-wide climate change strategy
- Lake Victoria Basin Commission developed a successful application for a transboundary project to the Adaptation Fund
- Observatory for Sahara and Sahel (groundwater in the MENA region) became accredited to the Adaptation Fund and is in the process of doing so for the Green Climate Fund
- Neman basin developed a transboundary adaptation strategy
- Dniester basin developed a transboundary adaptation strategy and its implementation plan as well as implemented measures

Positive outcomes of these activities

- Transboundary adaptation strategies have inspired and facilitated national adaptation strategies e.g. in the Dniester
- Transboundary/ regional organizations as accredited agencies can submit funds for countries to climate funds, e.g. OSS
- Joint capacity-building on developing bankable project proposals e.g. in the Neman basin
- Cooperation on climate change adaptation can facilitate broader transboundary cooperation
- Donors are interested in projects based on basin-wide adaptation strategies and plans- e.g. EIB for Dniester
- Banks: compliance with international water law is an important aspect in the preparation of funding applications.

Conclusions

- Transboundary adaptation is a challenge, but it can be more efficient and effective
- It can eventually positively influence cooperation in general
- There is a need to communicate and reflect this in the climate negotiations, climate funds etc.
- Need for further work on financing climate change adaptation in transboundary basins
- Invitation to join the global network of basins by INBO and UNECE
- Invitation to our next global workshop on climate adaptation in basins on 29-30 April 2019 in Geneva

Thank you for your attention!

Outcomes of the training on how to prepare bankable project proposals for financing climate change adaptation in transboundary basins

- * Range of different funding possibilities with different focus and requirements – need for better overview and need to identify good fund and adapt proposal to funding source depending on project type
- * Bankability has different meanings for different banks – including with regards to transboundary basins
- * Each river basin organization is different and needs to find its «niche» regarding cc adaptation and demonstrate added value
- * Projects need to be technically sound and financially viable, and comply with environmental protection and social standards
- * Take sufficient time for project preparation
- * Political buy-in needed – e.g. agreement or MoU in basin (must be strong enough, even under political changes)

Example: Neman pilot project shared by Belarus and Lithuania (and Russia)

Baseline situation in 2010:

- Political tensions between the countries, geopolitical hotspot
- Absence of contacts at political level, some expert contacts
- Absence of a legal and institutional framework for cooperation
- Problems such as nutrient pollution, floods etc

Situation in the Neman in 2016

- Strengthened capacity to adapt to climate change of the riparian countries e.g. through developing a transboundary adaptation strategy
- Common understanding on future water availability and water use taking into account possible climate change impacts
- Input by Belarus to Lithuanian river basin management plan for Neman
- Improved transboundary cooperation in times of a changing climate in the Neman: draft bilateral technical Protocol (BY-LI) elaborated

How was this done?

- *Starting cooperation at expert level*: Assessment of the current state of the water resources of the Neman River basin
- *Focusing on a non-political issue of common concern: climate change*: Elaboration of common cc scenarios and forecasting of runoff changes, calculation of water balances, assessment and forecast of climate change impact on water quality
- *Comparing systems*: Analysis of the meteorological, hydrological, hydrochemical and hydrobiological monitoring systems in the basin
- *Sharing data*: Development of a common information platform
- *Joint experiences*: Common Field trip on the Neman in 2012
- *Involving stakeholders*: Three multi-stakeholder workshops in each basin country with stakeholders from different regions and sectors, many expert meetings and one high-level project conference
- *Agreeing on climate change impacts and actions*: Basin vulnerability assessment and strategic framework for basin adaptation

Water and Climate Change Adaptation in Transboundary Basins: Lessons Learned and Good Practices: Selected Lessons Learned

- 4. Integrate climate change within river basin management planning
- A flexible legal framework, such as a transboundary agreement, is important
- 48. Develop a mix of structural and non-structural measures, consider also ecosystem-based measures
- 52. Assess the economic, environmental and social costs and benefits of adaptation options at a basin scale
- 53. When selecting adaptation measures consider their impact on mitigation
- 54. Establish a participatory, transparent and explicit prioritization process
- 55. Locate adaptation measures at most beneficial location in a transboundary basin. Consider sharing costs & benefits

Achievements on climate change adaptation/ flood management

- Important legal framework for cooperation on transboundary aspects of climate change
- Global platform for exchanging experience: Task Force on Water and Climate since 2006, annual workshops since 2010
- Knowledge management hub: Guidance and collection of good practices and lessons learned on Water and Adaptation to Climate Change, Model provisions on transb. Flood management
- Programme of pilot projects and global network of transboundary basins working on climate change (Dniester, Neman, Niger, Congo, Mekong, etc.)

➤ Selected Achievements:

- Transboundary vulnerability assessments for the Dniester and Chu Talas
- Development of transboundary climate change adaptation strategies in Dniester and Neman which prioritize adaptation measures from basin perspective
- Revival of transboundary cooperation at political level in the Neman basin through cooperation on climate change, contribution to RBMP
- Implementation of adaptation measures in 3 areas in the Dniester: monitoring and information exchange, ecosystem restoration, awareness-raising. Reservoir modelling by AGWA

Activities on climate change in 2016-2018

- Increase recognition of the need for transboundary cooperation in climate change adaptation and disaster risk reduction
- Further mainstream climate change into the water community
- Exchange and collection of experience: e.g. focused on adaptation-mitigation linkages, scenarios, water scarcity, financing
- Replicate and upscale experience of the pilot projects and ensure their sustainability:
 - Implement developed transboundary adaptation strategies, e.g. implement some measures: Neman, Dniester, Chu-Talas
 - New basins in UNECE region having expressed interest: Alazani/Ganikh, Daugava, Mesozoic Transboundary Aquifer System (Belarus, Poland and Ukraine), Pripjat, Zapadny Bug, Panj, etc.
 - New basins outside the UNECE-region: Congo, Mekong, etc.

Strategic framework for climate change adaptation: Overview of Measures

Group of measures	Description of measures	Total estimated cost
Direct actions at the basin level	Signing an international agreement on the Neman River Basin	-
	Setting up and functioning of an International Commission for the Neman River Basin.	€
	Development of the overall Neman River Basin Management Plan	€
	Evaluation of status of ground waters and their vulnerability to climate change	€€

€- up to 100 ths €; €€- up to 1 mln €; €€€- from 1 to 10 mln €; €€€€- over 10 mln €

Lessons learned of the strategies developed

1. Having a clear mandate is important, ideally for and RBO
2. Process can take several years and
3. Title of the strategy may be slightly changed
4. Often some climate change studies had already been done nationally, but with different methodologies: importance of joint scenarios, modelling, needs and vulnerability assessment a
5. Importance of link between political and experts' level, e.g. through creation of a working group and regular meetings
6. Importance of concrete activities and involving population through concrete adaptation measures
7. Important, but challenging to link transboundary to national level, need for coordination and mainstreaming: e.g. organize national workshops
8. Strategy does not need to be perfect, can be updated

Global workshop on financing climate change adaptation in transboundary basins (Geneva, 12-13 Sept 2016)

- About 100 participants from governments, RBOs, (non) governmental agencies, academia, IFIs
- Under the leadership of the Netherlands and Switzerland, jointly with WB, INBO, IUCN, AGWA, WMO, GEF IW Learn,
- Presentations of GCF, EIB, AfDB, etc

OUTCOMES:

- The need to address the lack of capacity in river basin organisations (RBOs) and national authorities to prepare bankable project proposals;
- The need to generate replicable business models for financing climate change adaptation at the basin level;
- The need to put more emphasis on the transboundary dimension, which should be integrated into national adaptation projects, where relevant.
