**EAU ET ADAPTATION  
AU CHANGEMENT  
CLIMATIQUE**

Le changement climatique affecte déjà quantitativement et qualitativement les eaux douces et les écosystèmes aquatiques et se manifeste principalement par une plus grande fréquence et l'intensité des phénomènes hydroclimatiques extrêmes de sécheresse et d'inondation, auxquels il faut savoir s'adapter plus rapidement.

Pour cela, il faudra acquérir de nouvelles compétences, tant pour faire face à ces risques aggravés que pour mieux protéger et utiliser les ressources en eau et s'assurer d'une gestion optimisée de l'eau et de l'énergie dans les services collectifs et les entreprises.

**Reference: Committee on Non-Governmental Organizations  
2007 Resumed session (14-18 May 2007)**

Dear Mr. Jean-Francois Donzier,

We are pleased to inform you that the Committee on Non-Governmental Organizations at its 2007 resumed session, on 14-18 May 2007, has decided to recommend that your organization "Réseau International des Organismes de Bassin" be granted special consultative status.

Please note that this recommendation is still subject to the approval of the Economic and Social Council, which will consider and take action on the Committee's recommendation at its substantive session, scheduled for 2-27 July 2007 in Geneva.

Once taken, we shall inform you of the Council's final decision on your application.

Sincerely yours,

Hanifa Mezoui, Chief  
Non-Governmental Organizations Section/DESA

Lima-Paris Action Agenda

# Paris Pact on water and adaptation to climate change in the basins of rivers, lakes and aquifers

We, representatives of governments, international organizations, donors, national and transboundary basin organizations of rivers, lakes or aquifers, local authorities, of the civil society and companies, support the integration of fresh water into the Global Climate Action Agenda, especially for initiating or strengthening necessary adaptation actions in the basins of rivers, lakes, aquifers, large wetlands as well as coastal areas.

### GENERAL STATEMENT

Climate change is already affecting and will increasingly affect the quantity and quality of freshwater and aquatic ecosystems, especially through the intensity and greater frequency of extreme hydrological events, such as floods and droughts, as well as the increase in ocean level, which...

**357 SIGNATORIES!!**

We recognize that adaptation actions should be undertaken without delay to minimize the impacts of climate change on the populations' health and safety, on economic development and the environment, considering the importance of the protection of water-related ecosystems.

**The basins are natural areas where water flows on the surface and in the subsoil: they are the relevant territories for organizing water resources management.**

In order to ensure more effectiveness, these actions to adapt to climate change should thus be implemented at the level of river, lake and aquifer basins, through a joint, participative, integrated and sustainable water resources management.

### We should act quickly before it is too late!

To that end, mobilizing new and increasing funding dedicated to climate change adaptation in basins is essential. Therefore, new basin organizations and existing ones should be financed and strengthened to facilitate the cooperation, coordination and exchange of information, dialogue, consultation and prevention of conflicts between stakeholders and to enhance the implementation of adaptation measures and the sharing of benefits on the basin scale,

We encourage donors to support prior assessments and actions for adaptation to climate change in basins,

Local authorities and communities, economic sectors and the civil society should be better associated and involved in basin management, including in the definition and implementation of adaptation measures.

Cooperation and exchange should increase between the institutions involved, especially among the basin organizations at the global and regional levels in order to facilitate the transfer of experience and know-how on best practices in basin management and adaptation to climate change.

## 4 MAIN EXPECTED OUTPUTS:

- Direct cooperation established between existing, future or pilot basin organizations through twinning agreements;
- Mobilization within existing basin organizations of professional assistance capacities in order to facilitate the setting up or development of new basin organizations and the debate on their management options;
- A synthesis of available knowledge and know-how, of best practices, preparation of recommendations or guidelines and drawing-up of training modules;
- The networking of water documentation systems to share and get access to useful institutional, legal, economic and technical information at the international level;
